

SUN PARTS IDENTIFICATION

Sun standard cartridge valve model code comprise of seven characters alpha/numeric combination.

Sun standard body model code generally comprise of three alpha characters but can be alphanumeric combinations. Complete assemble number can consist of 10-12 characters.

Example: CBCA LHN YEV. The assembly to the left has two cartridges and one body.
(The complete assembly number as per the valve on the left will not be displayed)

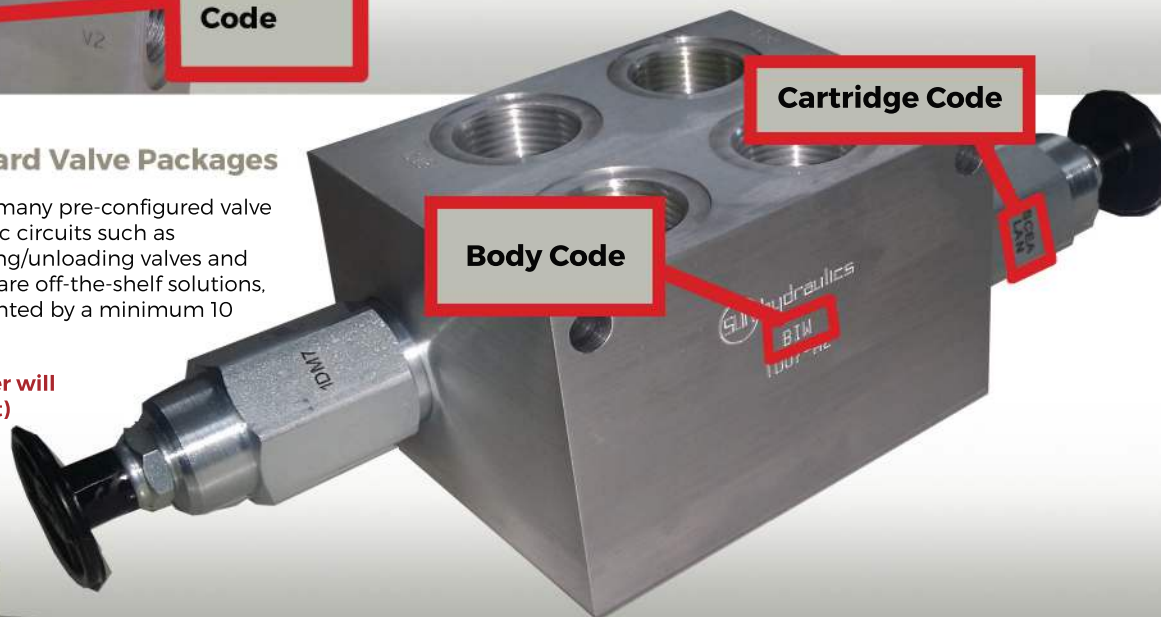

Material/coating options are defined using a "slash" modifier appended to the seven character model code.
E.g. ECV/S ECV/M

Model Codes for Standard Valve Packages

Sun manufactures and markets many pre-configured valve assemblies for common hydraulic circuits such as regeneration, accumulator loading/unloading valves and pressure sequence valves. These are off-the-shelf solutions. The assembly number is represented by a minimum 10 characters model code.

(The complete assembly number will not be displayed on the product)

E.g. SCEA LAN BIW

The Hydraulic circuit was designed by Statewide Hydraulics specifically for their client's unique application

Model Codes for Special Designed Valve Packages

Sun Hydraulics incorporated with their distributors and resellers, manufacture many uniquely design hydraulic valve packages and solutions around the world.

These usually have a unique part number very different to a standard part numbering system as shown in the examples to the left. They can contain corporate branding and more information.

Usually only available to their original designer, distributor or reseller.

Should you come across one of these valves, contact Statewide Hydraulics.

Should you have an application that require a unique valve, manifold or solution, contact Statewide Hydraulics.
